

Philips X-treme Power +80

Up to 80% more light • Meet DOT requirements

Here are the latest new ultra high performance headlight bulbs from Philips. This X-treme Power bulb gives an enormous improvement in beam focus and formation. They put up to 80% more bright white light in the beam's hot spot so your headlamps reach out further down the road — wider, too, for easier seeing in turns and on curvy roads.

They're made with the world's most precisely wound and accurately placed filament coil in a compact, AR-treated optical quartz envelope. Xenon, krypton, and other noble gases are included in the newly-reformulated fill gas. A discreet blue ring at the head of the bulb envelope gives you new-car style without sacrificing beam performance (as less advanced blue-glass bulbs make you do). And the anti-glare end cap is attractive platinum chrome rather than the ordinary dull black.

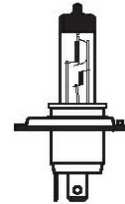

Fully DOT-certified and ECE-approved, as applicable by type. For the best possible street-legal performance from your headlamps, get these Philips X-treme Power bulbs.

Available in the following sizes:

- H1
- H7
- H4 / 9003 / HB2
- 9006 / HB4
- 9007 / HB5
- H13 / 9008
